

UGDS Customer Care, Patient Experience & Automated Outreach Platform

Executive System Specification & Phased Implementation Blueprint | Korle Bu Teaching Hospital

Executive Summary: The UGDS Enterprise Care Platform modernizes clinical patient feedback, bridges on-site legacy folder records (125,000+ files) via automated folder tracking, and automates patient relationship touchpoints (real-time complaints resolution, daily morning birthday SMS, and leadership quality alerts). This replaces traditional paper suggestion boxes with real-time operational transparency across all 13 dental departments.

1. Phase 1 Core Architecture & Live Modules

All modules below are fully implemented, locally tested, and operational:

Module / Feature	Capabilities & Impact	Status
Executive Overview Dashboard	Headline metrics (Satisfaction Rate, Total Surveys, Recommendation Rate, Follow-ups) + live weekly patient visits counter synced with folder watcher.	LIVE
Birthday Outreach Hub	Displays Tomorrow, Today, This Week, and This Month celebrants. Includes Automated SMS Notice (8:00 AM) + direct click-to-call action and call logger.	LIVE
Patients Directory & Movements	Indexes 125,042 hospital archive records. Displays Visited This Month (312), Yet to Visit (124k), instant search, and patient profiles.	LIVE
Unit Quality Flags & Email Alerts	Real-time underperformance monitoring. Triggers automated quality flag emails to the Dean & Unit Heads when a clinic falls below benchmark.	LIVE
Folder Watcher Daemon (UGDS_SMS)	Monitors hourly folder pulls (C:\eArchive_Bible). Cleans Ghanaian mobile numbers (MTN, Telecel, AT) and sends survey links via Arkesel.	LIVE
Priority Complaints Kanban Desk	Instant routing of 1-2 star ratings for phone investigation, remedial actions, and SLA resolution tracking.	LIVE

2. Phased Strategic Roadmap & Leadership Value

A clear 3-phase progression ensuring zero disruption to daily clinic consultations:

Phase	Target Timeline	Key Deliverables & Objectives
Phase 1: Modernization & Data Capture	Immediate / In-Flight	• Complete migration of 125,042 records from legacy MySQL 5.0 to cloud Postgres. • Real-time folder movement synchronization via background watcher. • Executive dashboard, Birthday Hub & Patients Directory local testing sign-off.
Phase 2: Zero-Touch Automation & Alerts	Post-Friday Deployment	• Automated 8:00 AM Birthday SMS Cron Service with personalized Dean's wish. • Automated Quality Flag Emails sent to Dean & Unit Heads upon low ratings. • Automated Weekly Friday 5:00 PM SMS executive summary to hospital leadership.
Phase 3: Full Hospital Management System	Strategic Expansion	• Electronic Medical Records (EMR) expanding the Patients Directory. • Digital Dental Charting & Odontogram for clinical surgical units. • 24-hour advance electronic appointment reminder SMS to eliminate clinic no-shows. • Two-way WhatsApp interactive patient care and post-op instructions bot.

3. Operational Stakeholder Roles Matrix

Stakeholder	System Touchpoint	Daily / Weekly Operational Responsibility
Dean & Directorate	Executive Overview & Reports	Receives automated weekly SMS & quality flag emails; reviews hospital-wide satisfaction scores.
Unit Heads (13 Clinics)	Unit Dashboard & Flag Alerts	Receives email alerts if clinic rating dips; addresses recurring cashier or treatment bottlenecks.
Customer Care Officers	Birthday Hub & Follow-ups Desk	Reviews Tomorrow's Celebrants to place personal calls; investigates and resolves patient complaints.
Records & Reception	Folder Watcher & Directory	Runs local watcher on front-desk PC; monitors monthly patient visit counts and recalls.
